

FasTest Frequently Asked Questions

Why FasTest

Astute's FasTest Test Automation Tool is built to enhance the test generation and test management capabilities of PeopleSoft by leveraging the PeopleSoft Test Framework. FasTest is a PeopleSoft bolt-on that solves test automation challenges with your PeopleSoft applications.

What are Astute's Baseline PTF Tests?

Astute has baseline PTF Tests for all PeopleSoft applications V9.1, V9.2. These tests can be loaded into your environment allowing you to jump-start your testing efforts. These tests must be modified to suit your specific implementation footprint.

How does FasTest help with test management activities?

WorkCenter and Dashboards: FasTest includes pre-built metrics to track test outcomes, progress and state in near-real time providing visualizations and instant reporting for management and stakeholders.

Defect Manager: Fully integrated defect management capabilities including the ability to create defects and assign to other users.

When Should FasTest be Used?

How Does FasTest Help with Test Generation?

TEST CASE GENERATOR

Create multiple test cases or test data sets to improve test coverage, increase assurance and de-risk your project outcomes.

PROCESS SEQUENCER

Sequence or group end-to-end process tests, module tests, configuration tests and integration tests.

TESTPLOSSION

Leverage your data to generate test cases

TEST MANAGER

Manage all of your relevant PTF life-cycle tasks in one convenient location.

Is FasTest a Load Testing Tool?

No, FasTest was not designed as a tool for load testing. If load testing is a requirement please contact us.

Does FasTest Support Integration Testing?

Yes, if your integration test can be done with the PeopleSoft test framework.

How Do I Engage?

There are several engagement models.

Jump-start

PTF installation, training and best practices for development, maintenance and migration.

Accelerate

- Retrofit our Baseline tests to your configuration.
- Utilize your configuration for test mangement.

Automate

- Build shell tests to automate end-to-end processes.
- Build "batch" routines to run test by module, by function etc.
